

Jesse Stoakes Research Award

2009 Comments from Students

“I feel like the areas of greatest learning occurred when sitting down with Dr. Dippel in clinic talking. He gave very good insights into medicine in general as well as the research process involved in clinical research.”

“I think it was extremely valuable. It really did make me want to pursue a career in cardiology because of how enthusiastic everyone was about the field. I also found that I really enjoy clinical research and would like to continue doing it one day.”

“It was an awesome experience. I love the idea of splitting the time between the cath lab and looking up patients records. It was a good balance between the two.”
